人在职场混,不闹白不闹

署 名

2021(7-9月) <u>分析|数据科学类 硕士 全职@Facebook</u> - 猎头 - 技术电面 | **@ Positive @** AverageFail | 在职跳槽

4 100% (3)

看地里面RDS比较少,来贡献个数据点。

总共1小时的面试,分为四个部分: SQL, coding, Statistics, ML1. SQL: 地面出 现了很多次的. 2张表 user_network_requests 和 user_country.

01. user_network_requests | userid | timestamp | data_center | success |. 03. 04. | 10032 | 15009 | A | 1 | -baidu 1point3acres I 10032 | 15097 | C | 0 |. check 1point3acres for more. 06. user_country.1point3acres | userid | country | 08. | 10032 | US | 复制代码

The dog ate my book

My friend is happy today

(b) a name file with one name per line, with no duplicates, e.g,

Dog. From 1point 3acres bbs

book.x

write a function name_count(s_file, n_file) that prints out for each distinct name in the names file the number of times it appears in the sentence_file, treat names as case-insensitive.

3. Statistics:

let's say you ask some people "do you like ice cream". And you get some number of people who say they do like it. How would you determine the fraction of people who like ice cream and uncertainty? n=say yes, m=say no, m>10,n>10

有盆友知道怎么回答这一问的可以来说一说, Iz的Statistics不太行 4

4. ML:

Let's say that we have a dataset that includes body_length, weight, and bread of dogs. We would like to model weight as a function of other variables. weight = b0 + b1*body_length. we run the model and get values for b0 and b1, how would we determine uncertainties on those values? How would you alter training to make outliers less influence?

感觉这个岗位还是比较偏Statistics, Iz技术栈偏ML而且Statistics答的很差一周后告诉我挂了

那道python coding 我写成这样不知道对不对:

with open("sentence_file.txt", "r") as s_file:

02. s_data = s_file.read().splitlines() .

03. s_data_lower = [i.lower() for i in s_data]

04.

 $s_{data} = ' .join(s_{data} =).$ 1point3acres 05.

<u>匿名者 发表于 2021-10-6 03:12</u>. check 1point3acres for more.

对于 SQL 编码问题

选择国家, count(*) 为 num_users_never_failed

1point3acres.com

请问LZ是这样写吗?

select country, sum(case when num_fail=0 then 1 else 0) as numUser_never_fail

from

(select country, U.user_id, sum(case when success=0 then 1 else 0) as num_fail . 1point3acres.com

具体啥题目啊, 积分不够, 看不到

题目是: let's say you ask some people "do you like ice cream". And you get some number of people who say they do like it. How would you determine the fraction of people who like ice cream and uncertainty? n=say yes, m=say no, m>10,n>10

(没设置积分权限 不知道为啥看不到)

对于 Python 编码问题.1point3acres

combine_sentence = senetence_list.join(" ").1point3acres

然后在combined_sentence中的O(n)中搜索每个单词以创建单词计数的字 典。

你是这样回答的吗?

```
对于 SQL 编码问题
                 选择国家, count(*) 为 num_users_never_failed. Waral du,
                 从. 1point3acres
                 (
                 选择国家、用户、sum(success) 作为 tot_success、count(*) 作为
                 tot_attempts. check 1point3acres for more.
                 从 t1
                 按国家、用户分组
                 总和(成功)=计数(*)
                ) t2
                                                                   O
